Prapti Kansagra

Business Analyst | Data Analyst

SUMMARY

Business Analyst and Data Analytics professional skilled in requirements gathering, process analysis, SQL, Excel, and BI reporting. Experienced in analyzing customer and operational data, translating business requirements into analytical solutions, and developing dashboards and KPI reports using Power BI and Tableau. Strong experience collaborating with cross-functional stakeholders in Agile environments to identify process improvements and deliver data-driven business solutions.

TECHNICAL SKILLS

Programming & Tools: SQL, Microsoft Excel, Python, Jira, Java, JavaScript, Git, GitHub, R, Pandas, NumPy, Automation
Data & Process Analysis: ETL Pipelines, Data Modeling, Data Validation, Data Cleaning, Data Processing, Data Mapping
BI & Reporting: Power BI, Tableau, Dashboard Development, KPI Reporting, Automated Reporting, Business Metrics, ServiceNow, Excel Reporting
Databases & Cloud: MySQL, PostgreSQL, Oracle, BigQuery, Snowflake, AWS, Hadoop/HDFS
Analytics: Exploratory Data Analysis, Statistical Analysis, Customer Analytics, KPI Analysis, Trend Analysis, Predictive Analytics
Business Analysis: Requirements Gathering, Stakeholder Management, Process Mapping, User Stories, SDLC, Agile/Scrum, Business Process Analysis
AI & ML: Scikit-learn, Predictive Modeling, NLP, Logistic Regression, Random Forest

EDUCATION

Bachelor of Science in Data Science, Minor in Business | NJIT

GPA: 3.6/4.0 | Dean's List

EXPERIENCE

Lead Business Analyst | Business Development

Aug 2025 - Jul 2026

Thaddeus Resource Center, CA Remote

- Developed SQL and Python workflows to extract, transform, and validate multi-source business data, reducing manual reporting effort by 35% and improving data reliability
- Analyzed business data using SQL, Excel, Power BI, and Tableau to identify trends and process improvements
- Analyzed business processes and performance data to identify operational gaps, trends, and opportunities for process improvement
- Translated business requirements into analytical workflows and technical solutions, collaborating with cross-functional stakeholders to resolve data discrepancies and improve solution delivery in an Agile environment

Business Analyst, Data Analytics

Sep 2024 - May 2025

Career Development Services, NJIT Newark, NJ

- Analyzed multi-source business data using SQL, Excel, and Python to identify performance trends, data gaps, and operational improvement opportunities
- Developed KPI dashboards and automated reporting workflows using BI tools, improving reporting efficiency by 30% and enabling stakeholders to monitor business performance and key metrics
- Gathered and documented stakeholder requirements, performed data cleaning and exploratory analysis, and presented analytical findings through dashboards to support program evaluation and resource allocation

Operations Analyst | Data Analytics & Project Management

Jan 2023 - May 2025

Office of Residence Life, NJIT Newark, NJ

- Developed operational dashboards and tracking systems to improve visibility into workforce activities and support data-driven decision-making across a 150+ staff organization
- Analyzed operational workflows, execution timelines, and performance metrics to identify process bottlenecks and recommend workflow improvements
- Implemented structured data collection and reporting workflows to improve data consistency, operational visibility, and business performance monitoring

PROJECTS

AI Business Intelligence Agent | Python, SQL, Streamlit, SQLite, Ollama

- Developed an AI-powered business intelligence application that converts natural-language business questions into SQL queries and delivers data-driven insights from an e-commerce database
- Built a SQL analytics engine to query customer, product, order, and revenue data, enabling analysis of KPIs including revenue, completed orders, average order value, product performance, and category trends
- Implemented query validation and safeguards to restrict database operations to approved analytical queries and prevent unauthorized data modifications
- Designed a Streamlit interface to make business data accessible through natural-language queries, reducing the technical barrier to SQL-based analysis and reporting

Customer Churn & Business Analytics | SQL, Python, Tableau

- Analyzed 7K+ customer records using SQL and Python to identify behavioral and transactional factors associated with customer churn and retention
- Performed exploratory and statistical analysis to identify high-risk customer segments, behavioral trends, and churn patterns
- Developed Tableau dashboards to communicate customer trends, and KPIs, translating analytical findings into customer retention recommendations
